

## **Cardiovascular System**

1

### **cardiovascular system**

- heart
- blood vessels
- blood

2

### **factors which can be changed**

- heart
  - rate
  - force
- blood vessels
  - tone
- blood
  - volume
  - composition

3

### **common problems**

- heart disease
- injury
- anaesthesia
- shock

4

## **heart**

- **conducting system**
- **myocardium**
- **blood supply**
- **valves**
- **nerve supply**

5

## **heart**

- **conducting system**
  - antiarrhythmics
  - chronotropes
- **myocardium**
- **blood supply**
- **valves**
- **nerve supply**

6

## **heart**

- **conducting system**
- **myocardium**
  - inotropes
- **blood supply**
- **valves**
- **nerve supply**

7

## **heart**

- **conducting system**
- **myocardium**
- **blood supply**
  - vasodilators
- **valves**
- **nerve supply**

8

## heart

- **conducting system**
- **myocardium**
- **blood supply**
- **valves**
  - vasodilators
  - (surgery)
- **nerve supply**

9

## heart

- **conducting system**
- **myocardium**
- **blood supply**
- **valves**
- **nerve supply**
  - chronotropes

10

## consequences of HF

- **upstream pressure increases**
  - increased preload
- **downstream pressure goes down**
  - vasoconstriction
  - increased afterload

11

## consequences of HF

- **blood dams back in lungs**
  - pulmonary oedema
- **blood dams back in body**
  - ascites & peripheral oedema
- **lack of forward flow to muscles and lungs**
  - tissue hypoxia

12

## **heart failure**

- cardiac arrest
- acute heart failure
- chronic (congestive) heart failure

13

## **cardiac arrest**

- prevention is better than cure!
- treat the causes before it happens!

14

## **What would you do?**

- 7 year old fluffy dog
- not breathing
- no palpable pulse

15

## **cardiac arrest**

- Airway
- Breathing
- Circulation
- Drugs
- ECG etc

16

## **drugs**

- **asystole**
  - atropine
  - adrenaline
  - bicarbonate

17

## **drugs**

- **ventricular fibrillation**

18

## **drugs**

- **ventricular fibrillation**
  - DC defibrillation

19

20

## drugs

- **ventricular fibrillation**
  - DC defibrillation
  - (lignocaine)
  - adrenaline
  - bicarbonate

21

## problems after CPR

- hypoxic myocardium & brain
- acidosis
- bruising of myocardium
- lung contusions / pneumothorax
- broken ribs

22

## acute heart failure

- after CPR
- anaesthetic overdose
- pericarditis
- metabolic illness
- progressive CHF

23

## severe acute heart failure treatment priorities

- ➊ avoid excitement  
sedate if necessary  
benzodiazepine or opioid
- ➋ give oxygen  
oxygen cage  
mask  
nasal canula
- ➌ place large bore iv catheter  
sedate if necessary  
benzodiazepine or opioid  
cut down if necessary  
local anaesthetic
- ➍ give frusemide iv  
1-2 i.v. up to 8 in dogs/mg/kg/hr
- ➎ attach ECG machine
- ➏ make diagnosis  
x rays, ultrasound, etc
- ➐ drugs  
vasodilators  
inotropes  
antiarrhythmics  
fluids

24

### **cardiac arrest**

- Airway
- Breathing
- Circulation
- persist for 15 mins
- if resuscitation sucessful, treat for acute heart failure
